

Name : Aditya Kirtane . Div:D15C , Roll No.26

Experiment: 2

Aim: Exploring Flutter Widgets

We can split the Flutter widget into two categories:

Visible (Output and Input)

Invisible (Layout and Control)

Visible widget

The visible widgets are related to the user input and output data. Some of the important types of this widget are:

1. Text

A Text widget holds some text to display on the screen.

2. Button

3. **Image**

This widget holds the image which can fetch it from multiple sources like from the asset folder or directly from the URL.

To add an image in the project, you need first to create an assets folder where you keep your images and then add the below line in **pubspec.yaml** file.

Output:

Images:

Text:

Butten:

Output:Hence we successfully explore flutter widgets
