

Exp-6

Aim: Selecting features for application development, the features should comprise of:

1. Common widgets
2. Should include icons, images, charts etc.
3. Should have an interactive Form
4. Should apply navigation, routing and gestures

Output:

Conclusion:

For effective application development, the selected features must include common widgets, visual elements (icons, images, charts), interactive forms, and proper implementation of navigation, routing, and gestures. These components work together to create a functional, user-friendly interface with smooth transitions and interactive capabilities.
